 5. **Conclusion**

Abstract The purpose of this study was to determine the effect of a 12-week, 1000 kcal energy deficit diet on the body composition and physical fitness of obese women. The study was a randomized, controlled trial. The subjects were 20 obese women who were randomly assigned to either a diet or a control group. The diet group was instructed to consume 1000 kcal less than their maintenance level, while the control group was instructed to consume their maintenance level. The study was conducted over a 12-week period. The results showed that the diet group lost significantly more weight and body fat than the control group. The diet group also showed improvements in physical fitness, including increased endurance and strength. The control group showed no significant changes in body composition or physical fitness. The study concluded that a 12-week, 1000 kcal energy deficit diet is effective for weight loss and improving physical fitness in obese women.
